Post-doctoral Position
to study
“Endocytosis, exocytosis, and signalling in endothelial cells: Coordination, molecular mechanisms and implications in blood vessel diseases.”

The Institute of Molecular Biology and Biotechnology, department of Biomedical Research in Ioannina announces informally a Post-doctoral position, which will be funded by the Program "Aristeia II" (note: a formal call for this position will be announced in about 1 month). The successful applicant will study in an integrative manner the coordination and interconnections between exocytosis, endocytosis and signalling and the implications in vascular remodeling. The laboratory has all the necessary equipment for research in molecular and cell biology, such as super resolution confocal and video microscopes, and offers the opportunity to work in close collaboration with leading laboratories in the field in Europe.

Applicants should have a PhD in any field that is relevant to the proposed project, such as molecular biology, cell biology, genetics, biochemistry, biotechnology, or a related.

Applications should include a full CV and the contact information of two referees and should be sent by email to:
