

IMBB-FORTH Welcomes ERC Applicants to Crete

Build Your Independent Research Program in One of Europe's Leading Bioscience Institutes

The Institute of Molecular Biology and Biotechnology (IMBB-FORTH), located in Heraklion, Crete, Greece, invites **ERC Starting, Consolidator, and Advanced Grant applicants** who wish to establish independent research programs within the thematic areas of our Institute.

IMBB offers **institutional support** for ERC applicants, including administrative support throughout the ERC application and **proposal development assistance** from experienced ERC-level scientists.

Successful ERC grantees will have immediate access to state-of-the-art laboratory space and core facilities and they **will be offered a permanent research position at IMBB**, enabling the establishment of a fully independent research group in Crete and integration into a vibrant, interdisciplinary bioscience community.

IMBB-FORTH combines **solid research infrastructure, strong international visibility, and a highly collaborative scientific culture**, making it an ideal destination for researchers seeking to develop ambitious ERC-funded programs.

We encourage talented researchers worldwide to join us in Crete and build the next generation of frontier bioscience.

For expressions of interest or preliminary discussions, please contact: **John Vontas**
